

Formating the OnlyOffice version of your article

General

This chapter introduces a handful of points that should be taken care of while preparing the OnlyOffice version of your article in CALC-IP.

Font style

Please select the provided font styles from the OnlyOffice menu (e.g. CalcIpMain) and do not change font size, font, etc, manually.

Code formating

Please select 'Plugins' and install the 'Highlight Code' plugin. Simply select the code block you want to format and chose the language you desire. For CALC-IP, we generally use the Googlecode style, and a gray (#d9d9d9) background.

URL's

The font defaults remove the color of hyperlinks. You can chose the 'Dark Green' from the font color dropdown to restore this for the selected link.
